

Modernize Healthcare Operations

Without Disrupting Care Delivery

Make your healthcare systems smarter

Augment. Automate. Accelerate.

Healthcare organizations face rising patient volumes, staffing shortages, reimbursement pressure, and increasing regulatory complexity. DataBank helps healthcare providers and payers modernize document-intensive workflows with intelligent automation.

Operational Efficiency & Acceleration

Reduce manual work, improve data accuracy, and accelerate care and revenue processes.

Scalable, Audit-Ready Performance

DataBank supports high-volume document operations with built-in validation and audit-ability, improving throughput without introducing new risk.

What We Deliver

Intelligent Healthcare Document Intake

Extract and classify patient forms, referrals, medical records, and attachments directly into workflows. Support common intake channels including scanned documents, email/PDF submissions, and portal uploads with standardized normalization.

AI + Human Validation

Combine automation with subject matter expert review to improve accuracy and reduce downstream errors. Route low-confidence fields to a validation queue for fast resolution using consistent review rules.

Structured, Searchable Data

Transform unstructured documents into structured, accessible data that supports clinical, administrative, and financial processes. Define field-level extraction requirements up front to ensure accuracy and measurable outcomes.

Where We Help

We work within your existing environment, enhancing, integrating with, or modernizing systems based on your operational goals. Common healthcare workflows include:

Referrals and Authorizations

Medical Records Requests

Claims Correspondence

Healthcare Workflow Challenges We Solve

Manual Intake & Administrative Burden

Digitize and structure high volumes of referrals, patient intake forms, medical records, EOBs, and claims correspondence using AI-powered capture and validation. Exception handling via confidence thresholds and validation queues (AI + human review) reduces rework.

Impact: Fewer manual touches, faster intake, and more time for higher-value patient and revenue cycle work.

Revenue Cycle Inefficiencies

Automate routing and data extraction for claims forms (e.g., CMS-1500, UB-04), EOBs/ERAs, remittance advice, denial letters, medical necessity documentation, and payer correspondence to reduce billing and reimbursement delays. Standardize key fields to minimize manual intervention and downstream rework.

Impact: Faster reimbursement, fewer denials, and more predictable revenue cycle performance.

Compliance & Audit Pressure

Enable HIPAA-aligned processing with structured classification, validation, and secure handling of PHI. Add audit-ready traceability across workflows.

Impact: Stronger compliance posture and reduced audit risk.

Disconnected Clinical & Administrative Data

Integrate scanned and digital documents into EHR, ERP, ECM, and enterprise systems. Deliver structured outputs (CSV, JSON, XML + searchable images) with mapped metadata.

Impact: Eliminate silos and make document data actionable across teams.

Let's Modernize Healthcare Document Operations

DataBank streamlines intake, revenue cycle, compliance, and document workflows for measurable healthcare impact. **Next Step:** Share 50–100 documents for a workflow assessment.
